YMHFA Training

YOUTH MENTAL HEALTH FIRST AID TRAINING

YMHFA Training Session

Are you actively involved with youth? Do you want to help them overcome difficult obstacles, such as mental health problems or substance addiction? Attend this YMHFA training session and learn the 5-step plan to intervening in both crisis and non-crisis cases. The training covers normal adolescent development, common mental health problems (e.g., anxiety, depression, disruptive behavior disorders), and respondent action plans. Sign up today!

For more information on YMHFA, visit:

Information Briefs

Project AWARE Information Brief

INTERCONNECTED SYSTEMS FRAMEWORK (ISF)

An Interconnected Systems Framework (ISF) strategically aligns the goals and processes of two school initiatives: Positive Behavioral Interventions and Supports (PBIS) and School Mental Health (SMH). Together, these initiatives aim to improve educational outcomes by minimizing and addressing behavioral and mental health concerns.

SCHOOL MENTAL HEALTH (SMH)

WHAT IS IT?
SMH incorporates a continuum of mental health services available to all students in a school. These services may be delivered through the collaboration of both school-based and community-based practitioners, and they aim to enhance student social and emotional skills while preventing and addressing mental health concerns.

WHAT ARE SOME BENEFITS OF SMH?
SMH leads to improvements in early identification of possible conditions, prevention strategies, and service access. Furthermore, it can decrease mental health related stigma and spread service impact.

WHAT ARE SOME CHALLENGES OR LIMITATIONS OF SMH WHEN IMPLEMENTED IN ISOLATION?
Schools may have difficulty implementing effective SMH programs due to too few staff with too many additional duties. There can also be a lack of integration among school-based and community providers, as well as an unrefined use of data to drive decision-making.

POSITIVE BEHAVIORAL INTERVENTIONS & SUPPORTS (PBIS)

WHAT IS IT?
PBIS is a school-wide, multi-tiered framework that uses data-based decision making to inform a continuum of proactive approaches to teach prosocial behavior and minimize problem behavior. In Tier 1 (aka Primary Prevention), all students are provided universal supports, including systematic and explicit instruction on school-wide expectations along with reinforcement of appropriate behavior and correction of inappropriate behaviors. In Tier 2 (aka Secondary Prevention), targeted and supplemental interventions are provided to students who are not responding appropriately to Tier 1 supports and may be at-risk for more serious behavioral concerns. Finally, Tier 3 (aka Tertiary Prevention) consists of intensive, individualized interventions and supports provided to students who exhibit problem behavior despite Tier 1 and 2 supports.

WHAT ARE SOME BENEFITS OF PBIS?
Benefits of PBIS include decreased problem behaviors as well as improved school climate, attendance, academic achievement, and social competence.

WHAT ARE SOME CHALLENGES OR LIMITATIONS OF PBIS WHEN IMPLEMENTED IN ISOLATION?
PBIS may not fully address the emotional needs of all students with more complex mental health issues. Furthermore, resources and structures at the upper tiers are less well-developed and validated.

INTERCONNECTED SYSTEMS FRAMEWORK (ISF)

WHY IS AN INTERCONNECTED SYSTEMS FRAMEWORK IMPORTANT?
IF streamlines resources between programs. It also addresses important gaps and limitations of both SMH and PBIS in an effort to improve student and system functioning.

HOW SHOULD THIS FRAMEWORK BE IMPLEMENTED IN SCHOOLS?
Methods used within an ISF should always be:

- Evidence-based
- Aligned with the multi-tiered system at all levels
- Applicable to all areas of the school
- Implemented in a collaborative and interdisciplinary manner
- Focused on the students and their families
- Culturally appropriate
- Data-driven

Project AWARE Information Brief

FOSTERING RESILIENCE WITHIN A TIERED FRAMEWORK

RESILIENCE DEFINED

WHAT IS RESILIENCE?
Adversity is any event or hardship that has the possibility to upset positive functioning. Adverse experiences may range from everyday setbacks to profound trauma. Even when children are exposed to similar obstacles, often, their reactions and outcomes vary greatly. When a child "bounces back" from these adverse situations, they are described as resilient. Resilience is a term that describes positive functioning in the midst of adversity that threatens a normal developmental trajectory. Because children bring a wide variety of adverse experiences into school, and resilience has many social influences, the school setting is an optimal place to foster resilience in children.

RISK AND PROTECTIVE FACTORS

Many factors that surround a child that may either increase or decrease the likelihood that the child will be resilient. These are classified as risk and protective factors.

A risk factor is any quality, characteristic or experience of an individual that increases the likelihood of maladaptation. To be considered resilient, a child must experience one or more risk factors that threaten developmental outcomes. Protective factors are any support that helps shield children facing adversity from negative social-emotional and mental health outcomes. Some examples of risk and protective factors are:

Protective Factors

- Individual: secure attachment (safety, social competence, problem solving, autonomy, sense of purpose, optimism)
- Family: family cohesion, good communication, parental warmth, nurturance, support
- School: extracurricular activities, cohesive school climate, high quality curriculum
- Community: higher social capital, neighborhood cohesion, opportunities for community involvement

Risk Factors

- Individual: recurrent temperament, biological factors, substance abuse, chronic illness
- Family: abuse, absentee parent, permissive parents, inconsistent parental monitoring, family conflict
- School: school disengagement, conflictual teacher relationships, peer rejection, punitive environment
- Community: violence, poverty, residential instability, discrimination

RESILIENCE VS. RESILIENCY

Resilience refers to the process of adapting positively through adversity whereas resiliency often refers to a personality trait within an individual. Though resiliency will affect overall resilience, resilience can be promoted by supporting other contextual factors that are outside of the child as well.

RESILIENCE IN SCHOOLS

Professionals can utilize a multi-tiered framework such as Positive Behavioral Interventions and Supports (PBIS) to foster student resilience in schools. PBIS aims to change school climate through the promotion of positive change in behaviors of staff and students (Bradshaw et al., 2008). Within this framework, there are three levels (primary, secondary and tertiary) at which students are served based on their level of need. The primary level is school-wide and focuses on promotion of positive behavior by establishing, modeling, practicing, and reinforcing clear and consistent behavioral expectations. The secondary level focuses on targeted groups of students that are not responding successfully to primary prevention supports. The tertiary level focuses on individual levels of support for students who were not successful at levels one and two. Resilience can be promoted at each of these levels.

Project AWARE Information Brief

SCHOOL-BASED MINDFULNESS INTERVENTIONS

WHAT IS MINDFULNESS?

Although there is no one agreed upon definition for mindfulness, it is often defined as the practice of "paying attention on purpose, in the present moment, and nonjudgmentally to the unfolding of experience moment by moment" (Kabat-Zinn, 2005, p. 140). In short, it involves focusing one's attention (Rempel, 2012). Mindfulness is said to have originated some two and a half thousand years ago from the religious traditions of Buddhism (Tishun & Viscusi, 2014). Around the late 1970's, Jon Kabat-Zinn introduced mindfulness to Western cultures as a secular health practice (Burke & Hawkins, 2012). Since then, mindfulness has become a very popular practice due to its various mental and physical health benefits (McKeaghen et al., 2012).

Mindfulness practice can take many forms. Youth interventions that have been shown to be effective include yoga, meditation, Tai Chi, breathing exercises, and body scan (Rempel, 2012). Two of the more commonly recognized interventions include mindfulness-based stress reduction (MBSR) and mindfulness-based cognitive therapy (MBCT) (Rempel, 2012). MBSR focuses on "mindful eating, body scan, sitting meditation, Transcendental, walking meditation, and mindfulness in everyday living" (Eyer & Kretzschmar, 2006 as cited in Rempel, 2012, p. 205). MBCT, on the other hand, focuses on handling negative or depressing thoughts by teaching participants to notice their thoughts and feelings in a nonjudgmental way (Rempel, 2012). However, Resilience, Bolognini, Fischer, and Long (2015) argue that mindfulness is only truly practiced when its three components—mindful awareness, mindful responsibility, and mindful effort—are integrated and used together so that the full spectrum of positive affects can be experienced.

MINDFULNESS IN THE SCHOOLS

Originally, much of the research on mindfulness practices focused on adult populations (Bryden & Frank, 2014). As a result, there is extensive evidence supporting the various health benefits for this population within the literature (e.g., Shapiro, Brown, & Segal, 2007; Davidson et al., 2005; van Aalderen et al., 2012). Only more recently have researchers begun to examine whether children and adolescents can also benefit from developmentally adapted mindfulness practices implemented in the school setting (Frank, Jennings, & Greenberg, 2013).

THE PROMISE OF SCHOOL-BASED MINDFULNESS INTERVENTIONS

Mindfulness programs in schools have taken varied forms, but have generally provided promising results (See Table 1 below):

Mental Health

In terms of mental health outcomes, mindfulness programs have often shown decreases in stress levels (Castro & Lawler, 2014; Edwards, Adams, Waldo, Haffield, & Berger, 2014; Singha et al., 2013; Bluth et al., 2015; Kuyken et al., 2015), rumination, intrusive thoughts, emotional arousal (Mendelson et al., 2010; Singha et al., 2013), and depression symptoms (Lau & Puts, 2011; Edwards et al., 2014; Bluth et al., 2015; Kuyken et al., 2015), along with increases in emotional well-being (Vafar, Matheson, & Shapoval, 2014) and self-compassion (Edwards et al., 2014) among participants.

Behavior & Physical Health

Benefits have also been shown to extend to behavior and physical health as well. Some commonly reported outcomes include increased on-task behavior (Carbone, Roach & Fredrick, 2013; Felver, Frank, & McEachern, 2014), healthy responses to stress (Mendelson et al., 2010) and prosocial behavior (Schonert-Reich et al., 2015), as well as less negative coping, lower cortisol levels (Singha et al., 2013) and lower self-harm (Britten et al., 2014).

Academic

Finally, research on practicing mindfulness in schools has also suggested improvements in cognitive performance (Zinner, Hermsmeider-Katz, & Weisch, 2014), school self-concept (Schonert-Reich et al., 2015), and engagement (Felver et al., 2014) as a result.

This brief was developed in part under grant number ODEA 61,240 from the Substance Abuse and Mental Health Services Administration (SAMHSA), U.S. Department of Health and Human Services (HHS). The views, policies, and opinions expressed are those of the authors and do not necessarily reflect those of SAMHSA or HHS.

We also would like to acknowledge the Ohio Department of Education for their support of this work.

Prepared by Allison Smith, Emily Hoffmeyer, & Joannee Hunt, Indiana University

Screening and Evaluation Compendium

MENTAL HEALTH, SOCIAL-EMOTIONAL, AND BEHAVIORAL SCREENING COMPENDIUM

Center for School-Based Mental Health Programs

Ohio Mental Health Network for School Success

1

Comparison of Select Screening Tools

Instrument	Author/Year	Description	Target Population	Length	Other
A Safe Environment for Every Kid-Parent Questionnaire (SEEK-PQ)	Dubowitz et al. (2012)	Parent questionnaire that screens for parental behavior, hardships, and other psychosocial problems that could put their children at risk for maltreatment	0–5 years old	15-items	Available in English, Chinese, Spanish, & Vietnamese
Acceptance of Couple Violence	Foshee, Fothergill & Stuart (1992)	Brief assessment of attitudes towards, and acceptance of, dating violence	Originally for 8 th -9 th graders, but has been used with older adolescents	11-items	Spanish version available (but not through this compendium)
Brief Impairment Scale (BIS)	Bird, Canino, Davies, Ramirez, Chavez, Duarte & Shen (2005)	Assessment of interpersonal relations, school/work functioning, and self-care/self-fulfillment	Children & Adolescents	23-items; 3–5 minutes	
California School Climate and Safety Survey (CSCSS)	Furlong, Morrison & Boles (1991)	Student self-report assessment of school climate and safety issues	Grades 4 th -12 th	Short Form: 40-items; Brief Form: 15-items	
Car, Relax, Alone, Forget, Friends, Trouble (CRAFT)	Knight et al. (1999)	Screen for high risk alcohol and other substance use disorders	Children under 21 year olds; recommended for adolescents	4–9 items	

Student Risk Screening Scale (SRSS; Drummond, 1994)

Description

Screening tool for signs of antisocial and externalizing behavior in students. The SRSS is used class-wide; that is, teachers screen every student in their classroom.

Target Population

Students

Informants

Teacher

Logistics/Use

Teachers rate every student in their class at the same time. Screening should ideally take place three times a year (once in October, December and April/May).

7-items

Completion time: 10-15 minutes for classrooms of 25 students

A total score is derived, which places students into low, moderate, and high risk categories.

Sample Technical Properties

The SRSS has been shown to have excellent accuracy predicting externalizing and internalizing behavior problems (Lane et al., 2009). Specificity and sensitivity are excellent for externalizing behavior, and specificity is excellent for internalizing behaviors; however, sensitivity has been shown to be weaker for internalizing behaviors (Lane et al., 2009). Lane, Bruhn, Eisner, & Kalberg (2010) found strong internal consistency, test-retest stability, predictive validity, and social validity.

Cost and Availability

Free and available at:

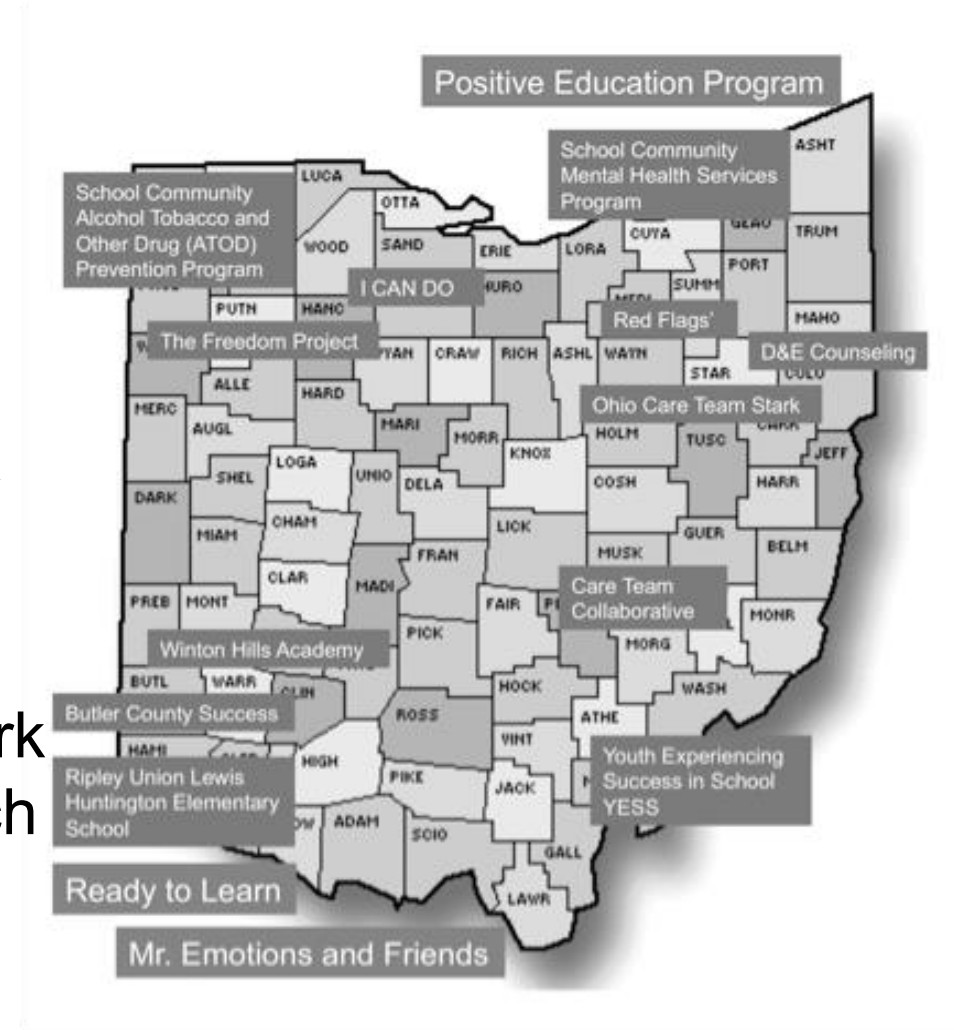

<http://files.eric.ed.gov/fulltext/ED474474.pdf>

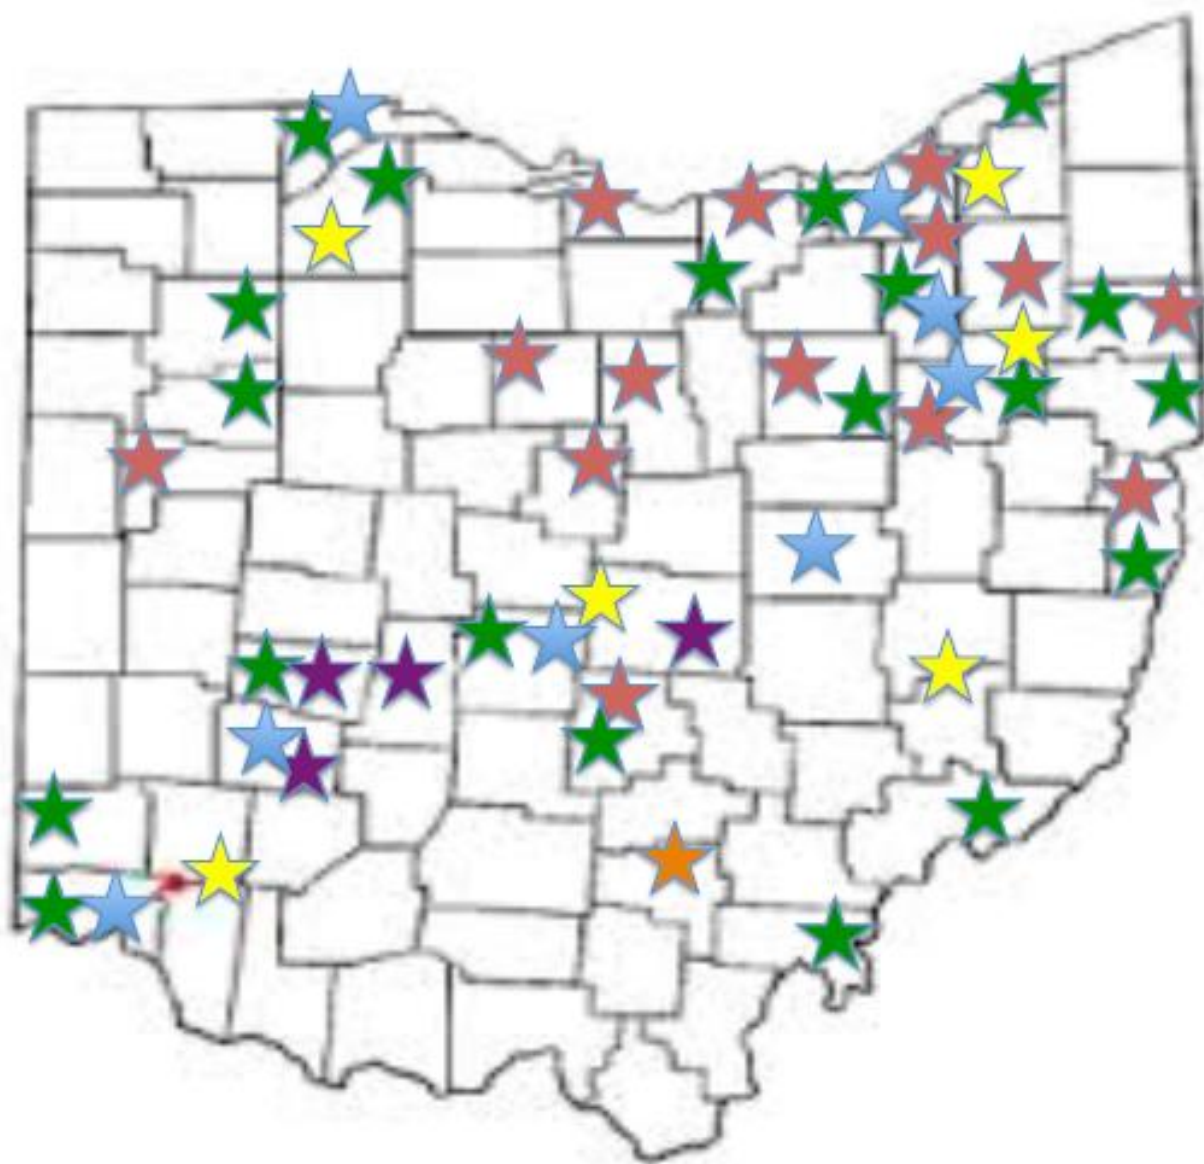

Other

In addition to its use as a screening tool, the SRSS can also be used as a tool for monitoring changes in student risk status over time.

The Ohio Quality and Effective Practice Registry

- Highlights schools and school-community partnerships successfully addressing academic and/or social emotional needs of students.
- Creates a state-wide network for schools to learn from each other in implementing successful school mental health programs.

Pockets of Excellence

- Trauma Informed Care Collaborative, Regional Members
- Every Moment Counts, OT Change Leaders
- Red Flags National, Programs
- Kathy's Autism Project
- Olweus Bullying Prevention Program, Trainers

New PBIS Assessment Tool

- School-wide PBIS (SWPBIS) Tiered Fidelity Inventory – Version 2.1 *OSEP Technical Assistance Center, www.pbis.org*
- Measure of adult implementation of PBIS

Tiered Fidelity Inventory (TFI)

- Improved version of previous PBIS assessment tools
- Primary tool for future use with Ohio PBIS – other tools still can be used
- Preferred tool for Ohio PBIS Recognition System

Tiered Fidelity Inventory (Continued)

- Measures fidelity of implementation at each Tier (I, II, III)
- Ratings at each Tier can be measured separately or combined
- Ideally should be completed with an external PBIS coach (may be an SST staff or neighboring school district PBIS staff) “Coach” uses Walkthrough Tool prior to meeting

Tiered Fidelity Inventory (Continued)

- Generally need 80% implementation to affect student progress
- Action Plan Form accompanies TFI
- Paper and pencil or electronic – strongly encourage entry on **PBIS**Apps found at <https://www.pbisapps.org/Pages/Default.aspx>

PBISApps

- <https://www.pbisapps.org/Pages/Default.aspx>
- Data entry for all PBIS assessment measures *and*

Every Moment Counts Project Emphasizes

1. **Mental health promotion** – in students with and without disabilities and mental health challenges;
2. **Inclusion of students** with disabilities and/or mental health challenges with non-disabled peers (LRE);
3. **Integrating related services in natural school and community contexts** – academic and non-academic;
4. **Collaboration** among all school personnel, community providers and families.

Welcome to Every Moment Counts!

Every Moment Counts is a mental health promotion initiative developed to help all children and youth become mentally healthy in order to succeed in school, at home and in the community. This work focuses on reframing mental health as a positive state of functioning – it is more than the absence of mental illness. Positive mental health is associated with feeling good emotionally, doing well functionally, and coping with challenges in everyday life. For children and youth, this means doing well during academic (classroom) as well as nonacademic (recess, lunch, after-school extracurricular activities) times of the school day.

The purpose of this website is share practical resources that can be used by school personnel, children/youth, and families to promote positive mental health and well-being in all children and youth throughout the day.

Suggestions for using this website: Start by reading the information located in the top tabs and then proceed to the side tabs. Developing a knowledge of positive mental health provides the foundation for implementing the model programs and mental health promotion strategies provided in the side tabs.

NATIONAL ASSOCIATION OF SCHOOL PSYCHOLOGISTS

Diabetes Management

This legislation ([House Bill 264](#)) will give Ohio schools information to train school employees about student diabetes management. Ohio Department of Education (ODE) now shares information to help schools understand their responsibilities. This information will include:

- » [Guidelines for diabetes management](#) 
- » [Letter discussing diabetes management and 504 plans](#) 
- » Recommended diabetes training materials
- » [Diabetes management survey](#) 

Additional information about this bill and school requirements will be available in the future. For additional questions, please contact Mark Smith (mark.smith@education.ohio.gov).

Additional information will be posted shortly providing additional resources that will help schools maintain good diabetes care for their students.
